Unit Testing:

A complete Unit Testing of the System is done for all the components and modules at every stage. Testing for all the components is done in its particular sprints.

If any task gets failed during the testing then it is tried reviewed in the same sprint. But in any case if the sprint completes then that task is taken on into the next sprint for reviewing.

A complete log for all the Test Scenarios can be found in the Test_Scenarios.xlsx([here](#)).

Conclusion:

- Code OK
- Rework and verify
- Rework and re-review
